

## KTF-II 系列离心通风机

- KTF-II 系列离心通风机是我公司在KTF基础上扩展开发出来的全新高效系列离心风机。
- 该系列产品针对大气治理行业的使用需求设计，具备高效率的特点，有利于环保设备的整体能耗降低。能效指标达到1级能效标准。
- 该系列风机标配多种传动方式。其中A式风机覆盖全系列机号，配备变频器+变频电机可以实现参数无极调节，相对于D、C式具备维护简单，体积小的优势。
- 本系列风机有250、280、315、355、400、450、500、560、630、710、800、900、1000、1120、1250共15个机号。

### ◎ 用途及使用条件

- 使用场所：可作为环保净化设施、空气处理设施的配套设备；还可广泛用于大中型工厂、民用建筑、大型广场、发电厂等场所。
- 输送的介质要求：输送的介质应为空气或其它无腐蚀性、不易燃易爆、不含粘性物质的气体，气体内所含尘土及硬物颗粒含量不大于 $150\text{mg}/\text{m}^3$ 。如果用于输送小颗粒物料，风机的叶轮使用寿命将缩短。
- 输送的介质温度：标准风机输送的介质温度不大于 $80^\circ\text{C}$ 。

### ◎ 风机的旋转方向及出风口角度

- 根据叶轮的旋转方向不同，风机分为右旋和左旋。从驱动端正视，叶轮顺时针方向旋转为右旋，以“右”表示；叶轮逆时针方向旋转为左旋，以“左”表示。
- 根据出风口的位置不同，风机可制作成7种不同角度（见下示意图），我公司标准产品为 $0^\circ$ 、 $90^\circ$ 、 $180^\circ$ 三种，其余角度可根据客户需要制作。

注：图中的箭头表示叶轮的旋转方向。

## KTF-II Series Centrifugal Fan

- KTF-II series of fans are updated high efficiency fans based on KTF series fans.
- This series of fans are designed to satisfy requirement of atmosphere protection industry, with high efficiency, energy-consumption of complete environmental equipment is reduced by using this series of fans with class I energy-saving standard.
- This series of fans have many driven types, A type direct driven fans cover all sizes with transducer and frequency conversion motor which can achieve at multi-speeds adjustable, A type fans are easier for maintenance than D & C type, and their volume is smaller too
- Model: 250,280,315,355,400,450, 500, 560, 630, 710, 800, 900, 1000, 1120, 1250.

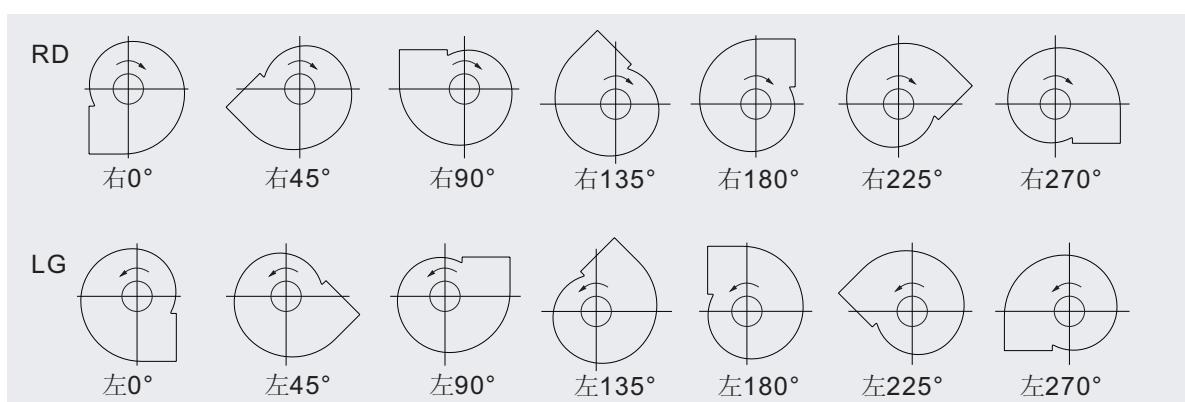

### ◎ Usage & Service Condition

- Operation place: Widely used for ventilation of large plants, civil construction, large square, and power plant, etc. And it can also be applied as the corollary equipment of air handling devices and environmental purification facilities.
- Transmission medium requirements: The transmission medium should be air or other gas without corrosiveness, inflammability and explosibility, and not contain stickup. Dust and other particles included in the air can not be beyond  $150\text{mg}/\text{m}^3$ . If used for transmission particles, the life of impeller will be shortened.
- Transmission medium temperature: below  $80^\circ\text{C}$  with standard structure.

### ◎ Direction of rotation & outlet angle

- According to the impeller direction of rotation, the fan has right-handed rotation and left-handed rotation. Look from the side of transmission, if the impeller turn clockwise, the fan is right-handed rotation; if the impeller turn anticlockwise, the fan is left-handed rotation.
- According to the outlet of fan, there are seven different blowing angles (showed as followed sketch), our standard products is  $0^\circ, 90^\circ, 180^\circ$ , other angles can be made as per customer's special requirements.

Remark: The arrows in the figure indicate impeller direction of rotation.

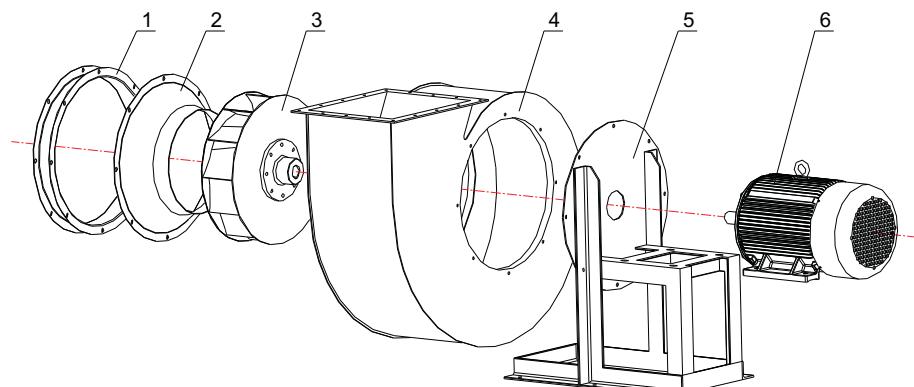

## ◎传动方式及结构形式

KTF-II 系列风机主要采用A式、C式和D式这三种传动方式，也可以根据客户的要求设计制作其他传动方式的风机。

- A式：电机直联传动。结构紧凑、维护简单。
- C式：皮带传动。其优点是可以通过改变转速的方法对风机性能参数进行调整，用以弥补选型误差，但皮带是易损件，需定期更换。
- D式：联轴器传动。D式相比于C式，结构较为简化紧凑，减小机体，但不能改变风机转速。

注：图中所示风机部件可能会根据订货要求或使用场合的不同而作适当变化，具体以实物为准。

Remark: The fan components shown in the figure may vary depending on the requirements of the order or the use of the equipment, depending on kind prevail.

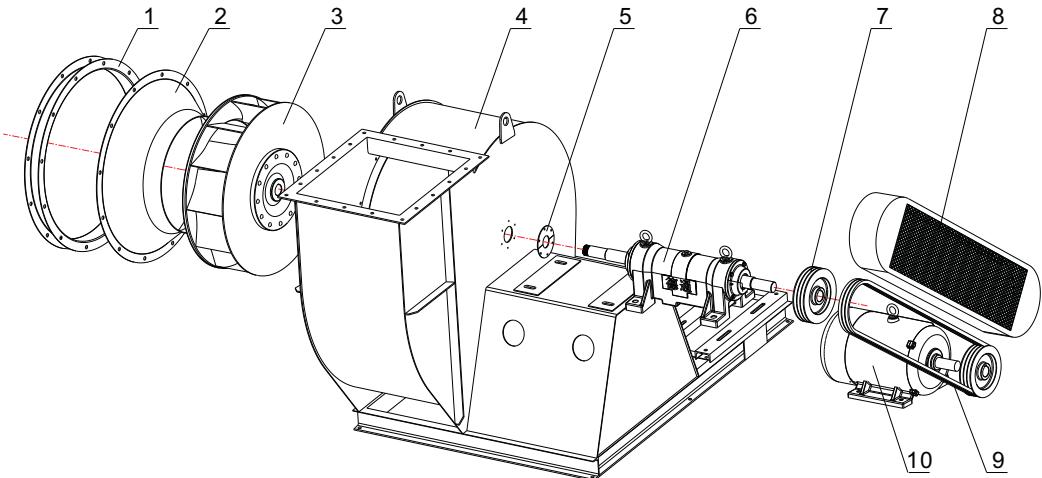

## ◎Driven Type & Structure

Three main driven types-A, C, and D are optional for KTF-II series of fans, other driven types can be specially made according to customer's demands.

- A type: motor direct driven, with the advantages of simple structure and easy to maintain.
- C type: belt driven. The performance parameter can be adjusted by changing the speed of the belt to make up the fan selection deviation, but the belt is wearing part which should be replaced regularly.
- D type: coupling driven. Compare to C type, D type is simpler and smaller, but the fan speed can not be changed.

## ◎ 注意事项

- 当使用环境对风机的振动有较高的要求时（如风机安装在楼板上），可配套使用减振器。选型时应当注意：标准风机的配置是不包括减振器的，用户可自行购置减振器，也可在订购风机时注明该风机加配减振器。
- 可根据用户需求配置风机附属机构，如调节机构（调节门及控制联杆）；控制机构（控制柜、起动柜及操作箱）；保护机构（各种测温及测振仪表，管路系统的软连接及膨胀节等）；其他类似于消声器、电动执行器及液力偶合器等等，都需要订货时加以注明。
- 风机用于输送高温介质时(介质温度大于80℃)，订货时应加以注明。

## ◎ 订货事项

选择好需要的风机以后，请参照以下几点订购：

- 风机型号：包括机号、旋向、出风口角度以及传动方式等。
- 在标准条件下的运行点性能参数，包括风机的流量、全压（静压）以及转速。
- 电机的品牌、频率、电压、绝缘等级以及防护等级。
- 采购数量。
- 有无其它特殊要求，如加配减振器或风机附属机构等。

## ◎ 风机型号说明

## ◎ Attention

- If have higher requirement for fan vibration (like fan assembled on floor slab), can match shock absorber, standard fan without absorber, customer need buy it by himself, also can mark need absorber when place order.
- Subsidiary accessories can be equipped according to customer's special demands, like adjust mechanism (adjust door and control link rod), control mechanism (control cabinet, starting cabinet and operation box), protection mechanism (various temperature measurement instrument, vibration measuring instrument, and soft connection and expansion joint of ducting system, etc), and other similar to the muffler, electric actuators and hydraulic couplings, etc. All the subsidiary accessories requirement need to be marked when ordering.
- If the fan will be used for conveying high temperature medium (medium temperature above 80°C), it should be indicated when ordering.

## ◎ Attention of ordering

After choose fan, please refer to below points:

- Fan model: include fan size, rotation, outlet angle and driving mode etc.
- Operating parameter under standard condition, include airflow, total pressure(static pressure) and speed.
- Motor brand, voltage, frequency, insulation class and protection class should be listed.
- Purchase quantity
- If there is any special demands, like adding absorber or fan accessories .

## ◎ Designation of products

angle  
rotation direction  
II series  
driving mode  
model of fan  
KTF series

## ◎ 技术说明

- 本资料中提供的风机性能参数是在标准条件下的数据：即介质为标准大气压下的洁净空气；温度等于20℃；空气密度等于 $1.2\text{kg/m}^3$ 。如果风机是在非标准条件下使用时，应换算为标准条件下的参数再进行选型。
- 性能曲线图中的功率曲线是指风机的轴功率，选配电机功率时需考虑以下安全系数：

$$\begin{aligned}&\leq 0.5\text{kW} \times 1.5 \\&>0.5 \sim 1\text{kW} \times 1.4 \\&>1 \sim 2\text{kW} \times 1.3 \\&>2 \sim 5\text{kW} \times 1.2 \\&>5\text{kW} \times 1.15\end{aligned}$$

## ● 性能曲线图选型示例

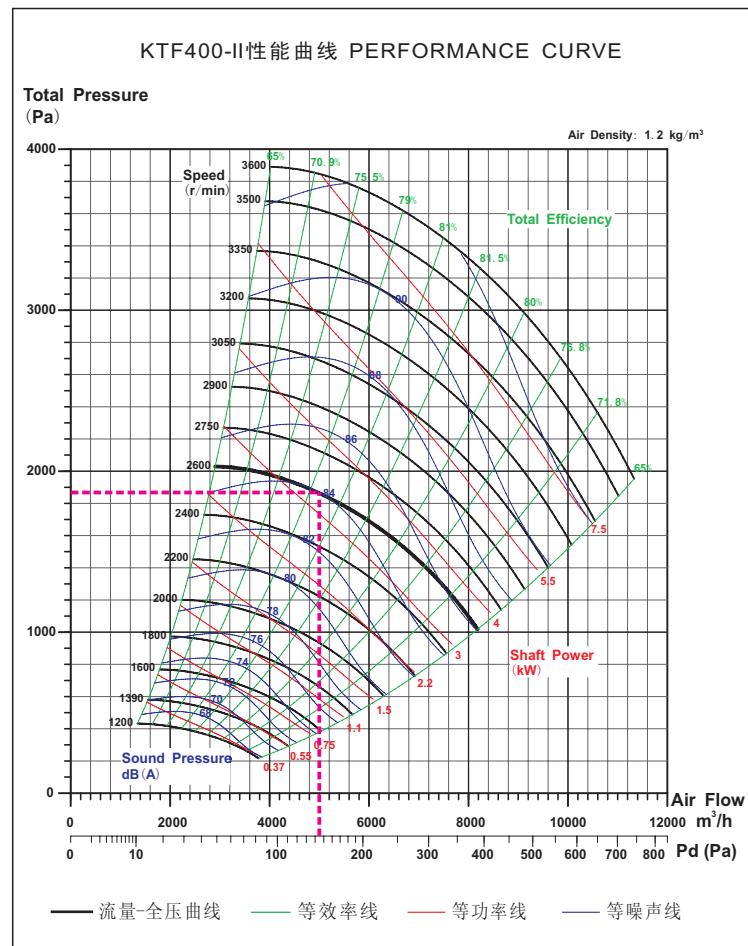

流量(Q)	$5000\text{ m}^3/\text{h}$
全压(Pt)	$1870\text{ Pa}$
动压(Pd)	$144\text{ Pa}$
静压(PS)=全压(Pt)-动压(Pd)	$= 1870 - 144 = 1726\text{ Pa}$
转速(Speed)	$2600\text{ r/min}$
全压效率(Total Efficiency)	79.5%
轴功率(Shaft Power)	$3.2\text{ kW}$
电机功率(Motor Power)	$3.2\text{ kW} \times 1.2 = 3.84\text{ kW}$
噪声(Sound Pressure)	取 $4\text{kW}$
	84dB(A)

## ◎ Technical note

- The performance parameter showed is date under standard condition: medium is clear air under normal atmosphere, temperature is 20°C , air density is  $1.2\text{kg/m}^3$ . If fan used in nonstandard condition, should exchange to normal data, then do model selection.
- The power on the performance curve are shaft power. Motor power is decided by Safety factor.

$$\begin{aligned}&\leq 0.5\text{kW} \times 1.5 \\&>0.5 \sim 1\text{kW} \times 1.4 \\&>1 \sim 2\text{kW} \times 1.3 \\&>2 \sim 5\text{kW} \times 1.2 \\&>5\text{kW} \times 1.15\end{aligned}$$

注：表中的重量数据不包含配用电机和联轴器的重量。配用不同厂家的电机时，会因为电机型号不同而导致外形尺寸略有差异。  
Remark: The weight data not include the weight of motor and Coupling. When equipped with different motors, the overall dimension may be slightly different because of the different motor size.
